

Wall Solutions for the Mining Industry

KEYSTEEL™ SQ FT »

a world-class structural retaining wall system that is specifically designed for use with heavy construction

BIN WALL »

easy to install in difficult or restrictive conditions and, when backfilled, transforms the soil mass into an economical gravity-type retaining wall

WIRE FACED WALLS »

assembled onsite, these monolithic structures provide low cost, long-term soil stabilization and can be designed for virtually any height or loading condition

Wall Solutions for the Mining Industry: Multiple Solutions. One Provider.

MSE with Keystone Walls »

Featured Project: W Stevenson & Sons Drury Quarry Upgrade

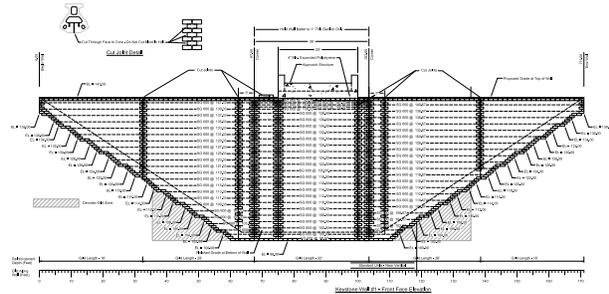

Design Challenges:

- » Differential settlement
- » Lower-spec granular backfill
- » 100T dead and live load
- » Complex geometry

Solution: Keystone® KeySteel™ SQ FT System

Advantages:

- » Cost-effective
- » Can be skewed around obstructions
- » Incorporates either steel or grid for reinforcement based on application
- » Labor economies of unskilled workers
- » High performance of steel reinforcements

MSE with Welded Wire Walls »

Application: Retaining Walls for Mining

Advantages:

- » Easily assembled even in remote site access locations
- » Significant cost-savings compared to other solutions
- » Incorporates either steel or grid for reinforcement based on application
- » Utilize onsite fill

Contech Bin-Wall »

Application: Gravity-Type Retaining Walls for Mining Use

Advantages:

- » Cost-effective
- » Quick and easy to install in restrictive conditions
- » Strength with flexibility - allowing for shifting with unforeseen ground movements that might damage or destroy rigid-type walls
- » No heavy equipment necessary to assemble
